

## Would you like to try using a new rehab App *RehabChat*?

RehabChat is an App that supports goal-setting and goal achievement.

Are you receiving rehabilitation following brain injury or stroke?

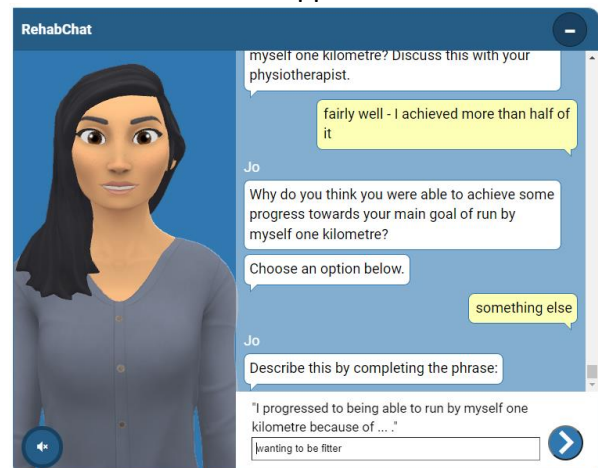

Would you like to try using RehabChat and then provide feedback?

Using a hand-held device

<https://images.unsplash.com/photo-1554415707-c1426770dada?withark=1.2.1&ixid=svhnz8f&w=1000&auto=format&fit=crop&w=500&h=500> (12-11-20)

How the RehabChat App looks

Customised dialogues. Software is Conversant from Clevertar <https://www.clevertar.com/>

- Are you a client who is receiving brain injury or stroke rehabilitation?
- Or are you a clinician providing brain injury or stroke rehabilitation?
- Are you English-speaking? and are you aged 18 years or older?

Please contact Judith Hocking: Ph. 0466 187 793, [Judith.hocking@flinders.edu.au](mailto:Judith.hocking@flinders.edu.au)

- Learn to use RehabChat and then provide feedback about what you thought of it, at a 60-minute Feedback Session
- Clients must be able to use a computer device (e.g. iPad, laptop) & provide own consent
- All participants receive a \$50 gift card
- After the Feedback Session, you can choose if you would like to use RehabChat as part of your usual rehabilitation care – the clinician supports the client to use RehabChat.

### What previous participants have said about RehabChat:

**Clients have said:** *'I felt more motivated with things'* *'reminded me that I really did want to do it'* *'it...made sure I was, yeah, doing it regularly'* *'really good just how [RehabChat] ... remembered your goals'* *'it was so simple'.*

**Clinicians have said:** *'a simple, clear framework, which incorporates the SMART framework, and which meets the standardised requirements of what should be done'* *'encourages [clients] to stay on track with their goals'* *'It was very easy for me'.*
